

METHOD AND SYSTEM FOR ALLOCATING BANDWIDTH IN A  
WIRELESS COMMUNICATIONS NETWORK

ABSTRACT OF THE DISCLOSURE

5        A method and system for allocating bandwidth in a  
wireless communications network includes a geo-location  
tool and an allocation engine. The geo-location tool is  
operable to receive data for a wireless communications  
network that includes a plurality of geo-location areas  
10 and to estimate bandwidth parameters for a geo-location  
based on the data. The allocation engine is operable to  
allocate bandwidth in the geo-location area based on its  
bandwidth parameters.
